## Patchwork Solutions

### Raven controller system and Replacement Sprayer pump

The purpose of this Solution is to provide a simple means for renewing the spraying abilities of the older sprayer by providing an easily fitted controller, pump and boom valves set. Using a compact, hydraulically driven pump allows the system to be fitted at any suitable position on the machine and pipe runs to be kept short for easy cleanout. Output is sufficient for most 24 m sprayers and the standard 4 boom section valves can be increased to 5,6 or 7 at extra cost. The Raven 450 console includes boom switches and full automatic control.

Basic system includes Raven 450 Controller, all cabling, 4 boom valves, pressure filter, chemfill output and Hypro 9300 pump regulated by hydraulic valve. Price £4200

Diaphragm pump system including 3 way diverter valve and pump Price £4700

Price includes all fittings and pipework connected.

Purchaser will need to provide Hydraulic and sprayer piping plus brackets as required.

Fitting can be arranged by agreement on a chargeable daily basis.
